List of Figures

1.1 Inconsistent and Consistent Checkpoints 5

1.2 The Domino Effect 6

2.1 Inconsistent Post-Failure States 27

3.1 Example of an incorrect state following recovery 44

3.2 The pre-failure execution of process Q 47

3.3 Recovery Up To the First Orphan Message 56

3.4 A Logged Message Can Become an Orphan 59

4.1 Merging Checkpoint Sessions 112

4.2 Disk Server Process Table 126

4.3 Preventing Checkpoints From Becoming Inconsistent 134

4.4 A Deadlocked Checkpoint Session 139

5.1 Structure of the Simulation Testbed 149

5.2 Application Execution Time With Message Logging 168

5.3 Application Execution Time With Coordinated and Independent Checkpointing 170

6.1 Application Execution Time with Message Logging 206

6.2 Application Execution Time with Message Logging, cont. 207

6.3 Application Execution Time with Coordinated and Independent Checkpointing 221

6.4 Application Execution Time with Coordinated and Independent

ix

Checkpointing, cont. 222

6.5 Application Execution Time with Increased Checkpoint Frequency I 231

6.6 Application Execution Time with Increased Checkpoint Frequency II 232
